To Whom It May Concern,

Feb 13, 2026

This is to certify that Mr. Murtaza Majid has worked with Scoutrex as a Computer Vision and AI Intern, where he played a key role in the development and research of advanced sports analytics solutions.

During his tenure, Murtaza worked extensively with PyTorch for deep learning model development and experimentation, designing and optimizing models under real world video constraints. He utilized Roboflow for dataset annotation, management, and augmentation, ensuring high quality and well structured training datasets for computer vision tasks. His work with OpenCV involved video processing, motion tracking, and bowler speed estimation using frame to frame displacement and FPS normalization techniques.

He also implemented human pose estimation and keypoint extraction using MediaPipe, applying keypoint based pose detection methods for detailed biomechanical analysis. Among his notable contributions was bowl release detection through temporal motion analysis and wrist dynamics tracking. In addition, he developed action phase segmentation pipelines to accurately identify bowling phases including run up, delivery stride, release, and follow through.

Murtaza demonstrated strong analytical thinking and research capabilities, particularly while experimenting with real world cricket footage affected by varying lighting conditions, camera perspectives, and motion blur. His ability to iterate on models and refine system performance contributed significantly to improving accuracy and robustness.

Throughout his engagement, he maintained professionalism, technical dedication, and a strong commitment to innovation. His contributions were valuable to the advancement of our AI driven cricket analytics platform.

We sincerely appreciate his efforts and wish him continued success in his future professional endeavors.

Sincerely,

Ibrahim

Muhammad Ibrahim Naeem
