SUMMARY

Data Science graduate and AI Engineer with hands-on experience integrating LLM APIs (Gemini, Groq) into NLP applications, RAG chatbots and voice agents, backed by deep learning work in PyTorch and TensorFlow.

EDUCATION

Bachelor of Science in Data Science, *Air University, Islamabad* **Completed: June 2026**

SKILLS

LLM & NLP: LLM APIs (Gemini, Groq), Large Language Models (LLMs), NLP, RAG, Prompt Engineering, LangChain, LangGraph, ChromaDB, HuggingFace, RLHF, Voice AI Agents
Machine Learning & Deep Learning: Python, PyTorch, TensorFlow, Scikit-Learn, XGBoost, LSTM, Pandas, SQL, OpenCV, YOLOv11
Tools: n8n, FastAPI, ElevenLabs, Twilio, Docker, Git, AWS, Supabase, Vercel

EXPERIENCE

AI Engineer (Contract), *Infomist* **Aug 2026 – Nov 2026**

- **Engineered** AI-powered lead-generation workflows for ChiefAI by integrating Gemini with n8n and Python automation; supported a 210-email, 6-touch outreach pilot with a 3.3% bounce rate and zero spam complaints, while automating research processes that eliminated approximately 45 hours of manual work.
- **Architected** an end-to-end AI voice receptionist from the ground up, developing a 110-node n8n backend, Python services, 9 webhook endpoints, and 10 LLM tools using ElevenLabs, Gemini 2.5 Flash, and Twilio; achieved 100% successful execution across 1,905 scheduled runs and 92% completion across 38 logged phone bookings, while reducing prompt size by 60% (85K to 33.6K characters).
- **Strengthened** platform security and reliability across Veer (AI recruitment) and ChiefAI by securing 2 exposed API endpoints, resolving 7 outreach workflow bugs, and validating voice-agent functionality through 9/9 regression tests and 110+ simulated calls.

LLM Task Trainer, *Turing, Remote* **Nov 2025 – Dec 2025**

- **Designed** prompts and multi-step task chains with external API tools; **mitigated** hallucinations through RLHF evaluation.

Computer Vision & AI Intern, *Scoutrix, Islamabad* **Dec 2025 – Feb 2026**

- **Optimized** PyTorch cricket video models for motion blur and varied lighting; built MediaPipe pose extraction and bowler speed estimation.
- **Developed** a bowling action-phase segmentation pipeline using temporal motion tracking and multi-angle camera synchronization.

PROJECTS

Awam Assist | *LangChain, ChromaDB, HuggingFace, Groq LLaMA 3.3-70B, FastAPI, React*

- **Deployed** a production RAG chatbot for 15 Pakistani government services (NADRA, FBR, Passport) with bilingual support and Speech-to-Text on Vercel and Railway.

MailIntel | *LSTM, TF-IDF, Naive Bayes, SVM, FastAPI, Supabase, Gmail OAuth* GitHub | Live Demo

- **Classified** 5,000+ real Gmail messages into 5 categories at 81% accuracy by benchmarking an LSTM against Naive Bayes (72.6%) and SVM (79.5%) behind a 13-stage text-cleaning pipeline, served via FastAPI with Gmail OAuth.

Document Categorization | *BERT, LSTM, 20 Newsgroups* GitHub

- **Fine-tuned** BERT against an LSTM baseline on the 20 Newsgroups dataset, with BERT outperforming, and deployed a web app for real-time predictions on user text.

AWARDS & CERTIFICATIONS

Winner – Air MLX Hackathon 2025: Achieved RMSE of 0.13 in parking violation risk prediction (multi-table SQL, PCA).
Certifications: Intermediate Python (DataCamp); BA Simulation (Forage); Hadoop, Spark, Power BI (Coursera).
